

SOFTWARE ENGINEER (m/w/d)

Who we are:

finccam delivers holistic investment solutions in simplicity and perfection. Our core competencies lie in the overall portfolio construction and the management of risk premia strategies as well as risk management strategies. These services are enabled by finccam central – our proprietary cloud-based investment platform.

Our greatest asset is our team: we combine the excellence of results with the motto of working among friends. In order to achieve outstanding results, we focus on the working atmosphere, the team, and individual advancement.

Are you ready to join us on our journey?

What we offer:

- **Hybrid work:** Work from home or the office, depending on your needs and your responsibilities.
- **Learn and share:** An experienced team with dynamic colleagues who love to learn and share knowledge whenever we collaborate. We continuously benefit from each other's different areas of expertise.
- **Latest tech stack:** We utilize the latest cloud technologies and agile methodologies. You will be exposed to cloud services (Azure), containers (Docker), CI/CD and DevOps (Azure DevOps).
- **Personal growth:** You get the opportunity to shape an investment firm and to rapidly grow into a leading engineering role.
- **The best idea wins:** It's what you say that counts, not who says it.
- **In-depth onboarding** into all relevant processes of the company. We guide you through your first steps until you take more and more responsibilities by yourself.
- **Attractive compensation** at a startup that was profitable from day one.
- **Location and gear:** We are located in central Munich and offer high quality hardware.

Your contribution:

- You enable the scaling of our business via our state-of-the-art technological infrastructure, being an integral part of our software engineering team who builds and maintains finccam central.
- You take ownership of services and processes and are responsible for the full development lifecycle from ideation to delivery and maintenance.
- You build new product centric features for finccam central as well as maintain and scale it while we continuously onboard new clients.
- You simplify or automate repeated tasks and processes, ensuring that all team members can contribute their most creative and meaningful work.
- You constantly and closely collaborate with portfolio managers, enable them to contribute their deep financial expertise to our core computation engine, help identify business challenges, and translate them into technical solutions.

About you:

- As a foundation for your contribution, you are curious to deeply understand asset management business processes and workflows.
- You have the desire to play a key role in growing finccam on strong technological feet and to shape our future with your ideas.
- You can organize yourself efficiently, learn new things quickly, communicate clearly to tech and non-tech audiences, and thrive under minimal supervision.
- You have already worked in larger software projects, e.g., through internships, freelance projects or within a study program.

- You have experience in object-oriented programming, database systems (SQL or NoSQL) and version management.
- You are business fluent in English or German.
